CybTouch 12 PS is designed to control synchronized press-brakes with 4 axes.

As part of the CybTouch numerical controls’ family, CybTouch 12 PS was designed with the OEM’s needs in mind. Offering a broad range of machine functionalities in a very accessible way, it can thus be easily and precisely fine-tuned to accurately match the needs of the machine it controls.

Boasting a very user-friendly touch screen interface, CybTouch 12 PS is a versatile numerical control that will make any end user feel immediately at ease. With features such as graphical profile drawing and manual bend sequencing,

CybTouch 12 PS is a powerful, efficient and productive numerical control for your synchronized press-brake.

The new beam management offers smoother and faster movements with higher precision.

High speed RFlink wireless communication facilitates backup, restore, data transfer functions with laptop computers, as well as beam movements’ traces with the included oscilloscope.

CybTouch 12 PS is integrated into a sleek and modern housing, or can optionally also be delivered as a robust panel.

**Standard software specifications**

**User friendliness**

Excellent readability thanks to the large characters, big buttons and vivid colors. So intuitive that the user can be operational in no time. Visit the Video section of our website and see for yourself. Pop-up messages for security or external malfunctions.

**EasyBend page**

Provides immediate easy use of the machine: a second operator can briefly interrupt production without changing the program when an urgent bend is required.

**Screen content**

Can be simplified to its bare necessities by removing all unused functions, buttons or information.

**Wizards**

Complete set of Wizards to help setting up the back gauge axes and the beam. Machine setup is made very simple, straightforward, more reliable and less time-consuming.

**Configuration**

Aaxes configuration, inputs/outputs and auxiliary functions can be made to precisely fit the specific needs of the machine.

**Manual bend sequencing**

The order in which the bends will be executed can be easily and intuitively defined.

**Automatic bend sequencing (option)**

The optimal order of the bends is calculated automatically.

**Memory capacity**

- 100 Punches
- 100 Dies
- 300 Programs
- 24 Sequences per program
- 10 Materials

Hardware specifications

Housing or panel version
Delivered integrated into a sleek and modern housing specially designed to be attached to a swiveling arm, or optionally also available as a robust panel version.

New indexing functions
Wizard functions make the definition of indexes a lot simpler, quicker and more precise.

Energy
Energy saving thanks to the integrated Eco mode function that automatically stops the main pump after a chosen time of inactivity.

Integration
Can easily be integrated into the electrical box diagrams. Ideal to upgrade machines without NC with minimal changes.

Wireless communication
RFlink wireless radio frequency data communication (need optional RFlink USB key) allows backup, restoring and firmware upgrades operations without any cable connection to the numerical control. During startup, the beam’s positioning curves can immediately be observed and checked on the PC.

Original parameters
Internal backup in a special safe memory allows the user to restore at any time the original parameters; machine is running again in an extremely short time in the event of a memory loss or involuntary parameter modification.

Electrical connections
Reduced electrical wiring, electrical cabinet size and equipment for lower set-up costs on each press brake.

Encoders
CybTouch 12 PS accepts encoders with or without complementary signals.

Axis and bending functions
The following elements are available and can be configured on CybTouch 12 PS by the OEM.

However, some functions depend on the machine construction.

Features availability depends on the number of available axes and inputs/outputs.

Back gauge axis & bending beam
- Wizards and auto-tuning of the axes (including for the bending beam).
- High precision and fast positioning algorithm for frequency converter axes.
- Oscilloscope for the beam trajectories via RFlink (without cable).
- Indexing in several modes (including for the bending beam).
- Inch / mm.

Bending features
- Program page at start up for quick accessibility.
- User friendly tool management.
- Automatic calculation of the bend depth, pressure and allowance, the back gauge positioning, the crowning, the angle and back gauge correction.
- Manual bend sequencing (according to the programmed material, thickness, bend angle and selected tools).
- Pressure management.
- Crowning (pressure or mechanical type).
- Crowning automatic calculation.
- Back gauge clearance during the bending process (yes / no).
- Sequence repetition.
- Part counter with auto-stop.
- Time and stroke counters for oil service.
- Pump start button.
